EDUCATION

Universidade Paulista - UNIP

Bachelor of Science in Computer Science; Expected Mar. 2026

Goiânia, Brazil

Jan. 2022 - Mar. 2026

EXPERIENCE

• 4Selet

Software Engineer II

Goiânia, Brazil

Nov. 2023 - Present

- **Full-Stack & Frontend Architecture:** Architected and delivered complex, data-rich interfaces using Angular and Laravel Blade across multiple product surfaces — applying component-driven architecture, state management, dependency injection, and leading the development of a high-traffic ticketing platform for Goiás Esporte Clube with a focus on UI performance and edge-case handling.

- **Proprietary Payment Gateway & Security:** Co-designed and built an in-house payment processing engine handling transaction flows, billing lifecycle, and financial reconciliation; implemented secure auth flows using JWT and Keycloak for multi-context access control across the platform.

- **Engineering Standards & AI-Assisted Delivery:** Structured CI/CD pipelines, defined code review standards, and mentored junior developers on SOLID and Clean Code — adopting GitHub Copilot and similar tools daily to maintain delivery quality across multiple concurrent workstreams.

• 4Selet

Mobile Engineer · Tech Lead

Goiânia, Brazil

Feb. 2023 - Nov. 2023

- **Component Architecture & REST Integration:** Built modular, reusable UI components in Flutter applying SOLID and Design Patterns; integrated RESTful APIs, Firebase services, and CI/CD pipelines in a fast-moving agile team.

• Anexo Soluções

Junior Software Engineer

Goiânia, Brazil

Mar. 2022 - Jul. 2023

- **Angular, TypeScript & Full-Stack Delivery:** Co-led frontend development of high-traffic web applications using Angular (v12+), RxJS, dependency injection, and state management; migrated a legacy React/Firebase application to Angular + TypeScript + NestJS + PostgreSQL, rewriting the full UI layer with improved modularity and maintainability.

- **BFF & Backend Integration:** Built backend-for-frontend layers using both NestJS with Prisma ORM (aggregating data from multiple services into clean REST APIs backed by PostgreSQL) and Next.js API Routes for Navesa projects, handling server-side data aggregation and API composition.

- **POS System:** Built an internal Point-of-Sale system for Santa Marta drugstore chain, including a cashier-side customer service rating app deployed across physical store locations.

PROJECTS

AbacatePay Open Source | github.com/AbacatePay: Active contributor within the 22-person core team — built the official Ruby SDK from scratch (published via RubyGems) and contributed to the PHP SDK on HTTP client implementation, error handling and payment transaction flows.

PROGRAMMING SKILLS

Languages: JavaScript, TypeScript, Dart, PHP, Ruby, Java, SQL **Frameworks:** Angular, NestJS, Flutter, Laravel, React, Ruby on Rails

Technologies: Prisma ORM, Docker, PostgreSQL, MariaDB, JWT, Keycloak, Firebase, AWS, Nginx, Git, CI/CD, Swagger, Scrum/Agile
